

SOLAR BALCONY SYSTEM

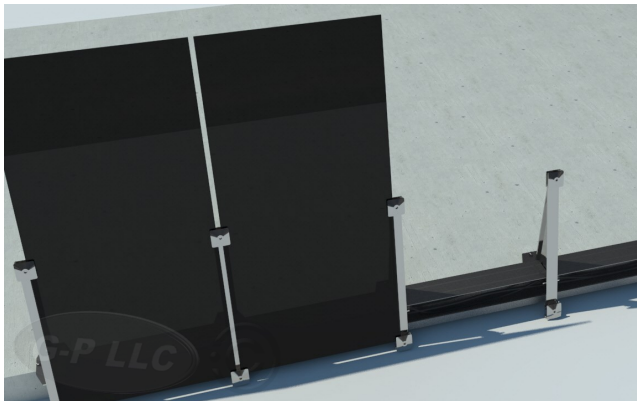

MODERN DESIGN AND SOLAR EFFICIENCY

Our thin film solar panel balcony offers modern glass balcony design combined with the solar efficiency of our panels. Choose from number of color and transparency variations of the panels in combination with the polished 316 stainless steel clamps and brackets. With our system, make your balcony railing both beautiful and efficient.

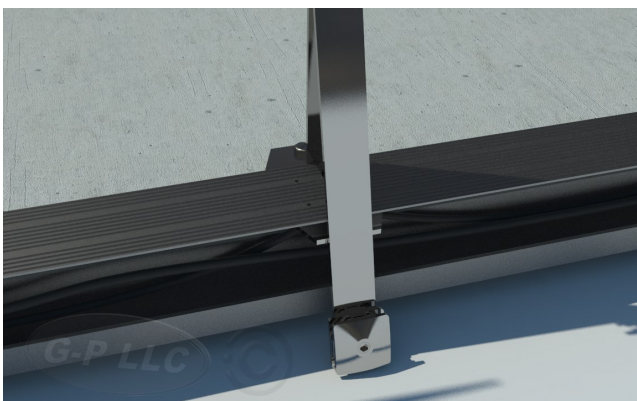

STAINLESS STEEL ATTACHMENT SYSTEM

Our stainless steel brackets are designed so they can be easily mounted to any surface type. Panels are attached with stainless steel clamps, which are previously mounted to the bracket. The whole attachment system gives a modern stainless steel accent to the balcony system. Number of other finishes are available for the attachment system.

PROTECTIVE THIN FILM SAFETY SOLAR GLASS

For use with the balcony system we use a special type of thin film solar glass, that enables the primary function of every railing system - protection. This system is also available without the solar feature.

CABLE AND ELECTRICAL COVERS

Due to the specific nature of the balcony system we developed a special cable tray system, that extends the footprint of the balcony floor. All of the electrical components are contained safely within the decorative cable tray.
